Sequence 4407, Application US/09938842A

Patent No. US20020160378A1

GENERAL INFORMATION:

APPLICANT: HAIPER, Joel

APPLICANT: Wang, Xun

APPLICANT: Wang, Xun

APPLICANT: Wang, Xun

TILE OF INVENTION: SAME, AND METHODS OF DIANTS, TRANSGENIC PLANTS CONTAINING

TITLE OF INVENTION: SAME, AND METHODS OF USE

FILE REFERENCE: SCRIPIAGO - 3

CURRENT FILING DATE: 2001-08-24

CURRENT FILING DATE: 2000-08-24

PRIOR APPLICATION NUMBER: US 60/227,866

PRIOR FILING DATE: 2000-08-24

PRIOR FILING DATE: 2000-08-24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WESOUR 4 SQ12, Application US/09938842A

; Sequence 78, Application US/09984245 ; Patent No. US20020165374A1

RESULT 11 US-09-984-245-78

0;

```
APPLICANT: YE, Jane et al
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: THEREOF
FILE REPERENCE: CLOO1160
CURRENT APPLICATION NUMBER: US/09/801,876B
CURRENT FILING DATE: 2001-03-09
NUMBER OF SEQ ID NOS: 8
SOFTWARE: FASESEQ for Windows Version 4.0

    No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note="Vector: pBluescript SK(+) vector DNA, phagemid excised from lambda ZAP; Site_1: ECORV; Site_2: ECORV; Genomic DNA was prepared from asynchronous blood stage forms of the cloned ANKA isolate of P. berghei grown in laboratory Swiss white mice. The DNA was purified from contaminating host DNA by Hoechst Dye 33258-Cscl ultracentriligation and precipitated. Purified DNA was digested with mung bean nuclease in the presence of 36-38 formamide at 50 c, as described (Vernick, K.D., Imberski, R.B., and McCutchan, T.F. 1988. Nucleic Acids Research 16:6883-6891. The ends of the digestion fragments were polished using T4 DNA polymerase, and the fragments size selected in the range 500-2000 bp. These were ligated into the ECORV-cleaved and dephosphorylated pBluescript SK(+)
                                                                   This sequence is a single read and was generated as part of a large scale clone-end sequencing project of the Tetraodon nigroviridis genome. For more information, please take a look at http://www.genoscope.cns.fr/Tetraodon.

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC ilbrary was prepared by Kazutoyo Osogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library and how to order individual BAC clones, the entire library or fullers for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Eukāryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.065 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative
/note="Organ: Kidney/Brain; Vector: pBACe3.6; Site_1:
EcoR1; Site_2: EcoR1; Female C57BL/6J mouse kidney and/or
brain genomic DNA was isolated and partially digested
with a combination of EcoR1 and EcoR1 Methylase. Size
selected DNA was cloned into the pBACe3.6 vector at the
ECOR1 sites. The ligation products were transformed into
BH10B electrocompetent cells (BRL Life Technologies).

of pWD42 (gil4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicilin resistance."

The library was constructed by Claire Murphy and Dr. James
McCarter at Washington University, St. Louis. The CDNA was
made by using Dynabead oligo-dT priming (Dynal). PCR based
library using a modified protocol from the SMART PCR CDNA
Synthesis Kit from Clontech. Directionally cloned into the
UDG sites of pAMP1. Newborn larvae were collected from
infected rats and provided by Dr. Judith Appleton of
Cornell University, Ithaca, NY (jaa2@cornell.edu)."

//note="Vector: M13mpl8 : Site_l: Hind III; C. parvum (IOWA isolate) genomic DNA was hydrodynamically sheared to produce fragments having a tight size distribution between 1.5 and 3 kb. Adaptors (pGTAGTCACAACAACTAGTOR) were ligated to the randomly sheared gbNA fragments and pAGTGTTTG linkers were ligated to the Hind III-cleaved M13mpl8 vector. The adaptor-containing inserts were annealed and ligated to the vector and transformed into E. coli strain DH125. Recombinant phagemid clones from the first plating of the library were randomly selected for sequence analysis using the M13(-21) forward primer."

Such a derivative is useful as a vaccine to induce an immune response and protect against Clostridium perfringens infection in man, pig, lamb, sheep, goat, calf and bird, which causes haemorragic enteritis, necrotic enteritis, enterotoxemia and lamb dysenteria. The new beta-toxin has been detoxified without impairing the immunogenicity, unlike prior art vaccines which used chemical and formalin detoxifying methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New detoxified derivative of Clostridium perfringens beta-toxin with retained immunogenicity, useful as a vaccine to protect against Clostridium perfringens infection
                                                                    The sequence is that of the vector pKS90 which was used in the construction of a detoxified immunogenic derivative of Clostridium perfiringens beta-toxin. Such a derivative is useful as a vaccine to induce an immune is more an appropriate and protect against Clostridium perfringens infection in man, pig, lamb, sheep, goat, calf and bird, which causes haemorragic enteritis, necrotic enteritis, enteritis, enteritis, and enterotoxemia and lamb dysenteria. The new beta-toxin has been detoxified without impalring the immunogenicity, unlike prior art vaccines which used chemical and formalin detoxifying methods. Production of the beta-toxin in gram positive bacteria prevents prior art difficulties of isolation from dangerous Clostridium perfringens, and purification from the Clostridium perfringen spores.

The specification describes an administration strategy for the delivery at the intestinal mucosa of cytokines or cytokine antagonists, preferably of acid sensitive anti-inflammatory agents such as interleukin 10 (iiii) or tumour necrosis factor (TNF). The method uses a cytokine-producing or cytokine antagonist-producing fram-positive bacterial strain (such as Lactococcus lactis). The use of non-colonizing bacteria expressing cytokines or cytokine antagonists allows the treatment to be directed to the disease site, whilst minimizing the possibility of degradation along the gastrointestinal tract. The recombinant bacteria are used in the treatment of inflammatory bowel diseases, especially chronic colitis, crohn's disease or an ulcerative colitis.
                                                                                                                                                                                                                                                    ;

The present sequence is a recombinant vector which may be used to generate a recombinant Lactococcus lactis capable of delivering a trefoil peptide in vivo. The recombinant microorganism is useful for computed in vivo. The recombinant microorganism is useful for manufacturing an agent for the delivery of a trefoil peptide to the gastrointestinal tract, and for treating sastric or intestinal diseases or of disorders, or lesions caused by gastric or intestinal diseases or constructs. The microorganism may also be used for preparing medicament to be used for treating gastric and vor gastrointestinal diseases or colitis, acute flare useps of Crohn's diseases, or ulcerative colitis, acute flare useps of Crohn's diseases, or ulcerative colitis, acute flare useps of Crohn's diseases of the gastrointestinal connections of disease states which can be treated by the colitis colitis ulcerosa). Disease states which can be treated by the method or compositions comprising the recombinant microorganism or trefoil peptides include disorders of and damage to the alimentary canal, cas well as for the protection and treatment of tissues that lie outside the animantary canal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant Lactococcus lactis for delivering a trefoil peptide useful for treating acute or chronic gastrointestinal inflammatory diseases or disorders, e.g. acute or ulcerative colitis, acute flare-ups of Crohn's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence is that of the pTREXIA expression cassette which was used in the construction of a detoxified immunogenic derivative of Clostridium perfringens beta-toxin. Such a derivative is useful as a vaccine to induce an immune response and protect against Clostridium perfringens infection in man, pig, lamb, sheep, goat, calf and bird, which causes haemorragic enteritis, necrotic enteritis, enterotoxemia and lamb dysenteria. The new beta-toxin has been art vaccines which used chemical and formalin detoxifying methods. Production of the beta-toxin in gram positive bacteria prevents prior art difficulties of isolation from dangerous Clostridium perfringens, and purification from the Clostridium perfringen spores.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents an expression plasmid for use in the course of the invention. The specification describes an administration strategy for the delivery at the intestinal nuccosa of cytokines or cytokine antagonists, preferably of acid sensitive anti-inflammatory agents such as interleukin 10 (ILIO) or tumour necrosis factor (TNF). The method uses a cytokine-producing or cytokine antagonist-producing Gram-positive bacterial strain (such as Lactococcus lactis). The use on-colonizing bacterial strain (such as Lactococcus lactis). The use form-positive bacterial expressing cytokines or cytokine antagonists allows the treatment to be directed to the disease site, whilst tract. The recombinant bacteria are used in the treatment of inflammatory bowel diseases, especially chronic collits, Crohn's disease or an increasing collits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Intestinal mucosa; cytokine; cytokine antagonist; anti-inflammatory; Gram-positive bacteria; Lactococcus lactis; gastrointestinal tract; inflammatory bowel disease; chronic colitis; Crohn's disease; IL10; ulcerative colitis; tumour necrosis factor; TNF; interleukin 10; ss.

The present sequence represents an expression plasmid for use in the course of the invention. The specification describes an administration strategy for the delivery at the intestinal nucosa of cytokines or cytokine antagonists, preferably of acid sensitive anti-inflammatory agents such as interleukin 10 (ILIO) or tumour necrosis factor (TNF). The method uses a cytokine-producing or cytokine antagonist-producing Gram-positive bacterial strain (such as Lactococcus lactis). The use of non-colonizing bacterial strain (such as Lactococcus lactis). The use of mon-colonizing bacteria expressing cytokines or cytokine antagonists allows the treatment to be directed to the disease site, whilst tract. The recombinant bacteria are used in the treatment of inflammatory bowel diseases, especially chronic colitis, Crohn's disease or an ulcerative colitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Intestinal mucosa; cytokine; cytokine antagonist; anti-inflammatory; Gram-positive bacteria; Lactococcus lactis; gastrointestinal tract; inflammatory bowel disease; chronic colitis; Crohn's disease; IL10; ulcerative colitis; tumour necrosis factor; TNF; interleukin 10; ss.

inflammatory
course of the invention. The specification describes an administration strategy for the delivery at the intestinal mucosa of sytokines or cytokine antagonists, preferably of acid sensitive anti-inflammatory agents such as interleukin 10 (ILMO) or tumour necrosis factor (TNF). Gram-positive bacterial strain (Such as Lactococcus lactis). The use of aniomizing bacterial strain (Such as Lactococcus lactis). The use of allows the treatment to be directed to the diseases site, whilst minimizing the possibility of degradation along the gastrointestinal bowel diseases, especially chronic colitis, Crohn's disease or an ulcerative colitis.

New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus

Claim 1; Page 1787-1788; 2084pp; English.

A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. AAX12938 to AAX13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based commercial importance. The products can be used to detect the presence of Enterococcus faecalis genome with of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to

```
modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                            SNP;

```

The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and concogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences.

(Ss) and sequences complementry to (Ss). The nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may complemented polymorphisms and also to be used in an array for analysing diseases associated with CpG dinucleotides e.g. array for analysing diseases associated with CpG dinucleotides e.g. ascertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases or the predisposition to specific ciseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters may be

Fragments of chemically modified genes associated with tumour suppressor genes and oncogenes, useful in designing primers and probes for analysing diseases associated with cytosine methylation state e.g.

Claim 1; SEQ ID No 386; 27pp; English.

differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The present sequence is one of the 533 genomic sequences derived from tumour suppressor genes and oncogenes. Sequences with even numbered Seq ID numbers are the complementary sequence of the corresponding odd numbered sequence (e.g. ID 2 and ID), ID 536 and ID 535, except for those whose partner sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid, oligonucleotides and peptide nucleic acid-oligomers, useful for detecting cytosine methylation state of genes associated with pharmacogenomics and for therapy of diseases e.g. cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; ds; bisulphite treatment; CpG; DNA methylation; cancer; tumour;

The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and oncogenes having a sequence taken from 558 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences (SS) and sequences complementary to (SS). The nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation state
which hybridises to or is identical to a chemically pretreated DNA of genes associated with pharmacogenomics and their complements, arranged in an array for analysing diseases associated with the methylation state (CpG) and/or detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The oligomers may also be used as PCR primers. The set of 87 nucleic acids and their complements is useful for diagnosis and therapy of solid tumours and cancer. The present sequence represents one the 87 DNA sequences or its complement.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   suppressor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; tumour suppressor gene; oncogene; antitumour; cytostatic; cancer; tumour; CpG dinucleotide; single-nucleotide polymorphism; SNP; cytosine methylation; ds.

and/or single nucleotide polymorphisms and also to be used in an array for analysing diseases associated with CpG dinucleotides e.g. cancers and tumours. The probes can also be used in a method for ascertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases or the predisposition to specific diseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The present sequence is one of the arrange of the arrange of the time of the time tumour suppressor genes and

```

insulin

The invention relates to an isolated Pleckstrin homology domain interacting protein (PHIP) that recruits proteins of the insulir

```
Transcription (STAT) transcription factors, to receptors that interact with and phosphorylate the proteins and STAT transcription factors, the nucleic acid encoding PHIP (nPHIP), a nucleic acid which binds to nPHIP or regions of it, analogues, fragments or allelic variants of PHIP or nPHIP, a nucleic acid sequence faving substantial sequence identity or or nPHIP, a nucleic acid sequence fully defined or nPHIP in another acid sequence fully defined them neuronal differentiation-related protein (NDRP) nucleic acid sequence or its exons as given in the specification, expression cannot be already expressing PHIP. The nucleic acids, proteins and antibodies are useful for diagnosis and treatment of a condition associated with an insulin receptor (e.g. diabbetes mallitus caids, proteins and antibodies are useful for diagnosis, peripheral acondition associated with an insulin receptor (e.g. diabbetes mallitus carefusly reproperty, nephropathy, netheroscierosis, peripheral arterial disease) or cancer (e.g. adenocarcinoma, leukaemia, breast cancer, prostate cancer, colon cancer, ovarian cancer and many others cancer, prostate cancer, colon cancer, ovarian cancer and many others cancer, prostate cancer, colon cancer, ovarian cancer and many others cancer, prostate cancer, colon cancer ovarian cancer and many others cancer, prostate cancer, colon cancer, ovarian cancer and many others cancer inmune disease, inflammation and immunodeficiency. The protein is also useful for discovering cunction. The present sequence is genomic DNA encoding PHIP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expressed sequence tag; secreted protein; cDNA isolation;
tor substrate (IRS) family, and signal transducer and activator of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the specification). ABM15762 to ABN27252 encode the human ORFX proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver,
                                                                                                                                                                                                                                                                                                                      ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; open reading frame; ORFX; gene therapy; cancer; cirrhosis; hyperproliferative disorder; psoriasis; benign tumour; haemorrhage; degenerative disorder; osteoarthritis; neurodegenerative disorder; cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis;
of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating CDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length CDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 35, Application US/08456265A
Patent No. 5767369
GENERAL INFORMATION:
APPLICANT: Alexander, Danny C.
APPLICANT: Ryals, John A.
APPLICANT: Stinson, Jeffrey R.
TITLE OF INVENTION: CHEMICALLY REGULATABLE AND ANTI-PATHOGENIC
TITLE OF INVENTION: DNA SEQUENCES AND USES THEREOF
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: CIAA-GEIGY Corporation
STREET: 520 White Plains Road, P.O. Box 2005
STREET: New York

Sequence 517, Application US/09962436
; Patent No. US20020081301A1
; GENERAL INFORMATION:
    APPLICANT: Soppet, Daniel
; TITLE OF INVENTION: Cancer Gene Determination and Therapeutic Screening Using Sign
                                                                                                GENERAL INFORMATION:
APPLICANT: BEASLEY. Ellen et al.
TITLE OF INVENTION: ISOLATED HUMAN ENZYME PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN ENZYME PROTEINS, AND USES
TITLE OF INVENTION: THEREOF
TILLE REPERENCE: CLOO1192
CURRENT APPLICATION NUMBER: US/09/818,512
CURRENT FILING DAIE: 2001-03-28
NUMBER: OF SEQ ID NOS: 4
SOFTWARE: FESTSEQ for Windows Version 4.0
SEQ ID NO 3

/note="Vector: pBluescript SK(+) vector DNA, phagemid excised from lambda ZAP: Site_l: EcoRV; Site_2: EcoRV; Genomic DNA was prepared from asynchronous blood stage forms of the cloned ANKA isolate of P. berghei grown in laboratory Swiss white mice. The DNA was purified from contaminating host DNA by Hoechst Dye 3328-CsCl ultracentifigation and precipitated Purified DNA was digested with mung bean nuclease in the presence of 36-38% formanide at 50 C, as described (Vernick, K.D., Imberski, R.B., and McCutchan, T.F. 1988 Nucleic Acids Research 16:6883-6896). The ends of the digestion fragments were polished using T4 DNA polymerase, and the fragments were polished using T4 DNA polymerase, and the fragments Skize selected in the range 500-2000 bp. These were ligated into the EcoRV-cleaved and dephosphorylated pBluescript SK(+) vector. Recombinant plasmids were used to transform E. coli XLIO-Gold host cells."

/note="Vector: pBeloBACII; Site_I: HindIII; Site_2:
HindIII; Ramets of P. trichocarpa (clone 383-2499) were
grown in the greenhouse. The trees were placed in the
dark for two days to deplete starch reserves prior to
harvesting approximately 60 g of fresh, young leaves.
Extraction of high molecular weight genomic DNA from leaf
nuclei was performed as described in Zhang et al. (1994).
Poplar genomic DNA was partially digested with HindIII
followed by three rounds of size selection from agarose
gels following separation by pulsed field gel electrophoresis (PFGE). In the first two size selections,
the pulsed field gel was run with a 90 second pulse at
160 V for a total run time of 18 hours at 110C. In both
runs DNA ranging from 200 kb to 400 kb was excised from
the gel and used in the next size selection. The final
size selection gel was run using a 6 second pulse at 150V
for 11 hours at 110C, and the compressed bank
was released from agarose by electroelution. The agarose
gel slice containing the >150 kb DNA was fragmented with
a razor blade and the resulting pieces placed in dialysis
bags (Gibco BRL, Rockville, MD). Electroelution was
carried out at 110C for 2 hours at 200 V followed by a second reversed-current pulse. Eluted DNA was quantified
by inspection on an agarose gel. HindIII-digested and
dephosphorylated pbelobBAC II (Shizuya et al. 1992) was
used for library construction. A molar ratio of
approximately 3:1 vector.insert was used for ligation.
Transformations were performed by electroporation using
Gene Hogs electrocompetent cells (Research Genetics,
Huntsville, AD) agar supplemented with 12.5 mg/ml
chloramphenicol and grown in 126 384-well microtiter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó
Populus balsamifera subsp. trichocarpa.

Populus balsamifera subsp. trichocarpa

Bukaryora; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;

Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots;

Rosidae; eurosids I; Malpighiales; Salicaceae; Populus.
